The NASA STI Program Office ... in Profile

Since its founding, NASA has been dedicated to the advancement of aeronautics and space science. The NASA Scientific and Technical Information (STI) Program Office plays a key part in helping NASA maintain this important role.

The NASA STI Program Office is operated by Langley Research Center, the lead center for NASA's scientific and technical information. The NASA STI Program Office provides access to the NASA STI Database, the largest collection of aeronautical and space science STI in the world. The Program Office is also NASA's institutional mechanism for disseminating the results of its research and development activities. These results are published by NASA in the NASA STI Report Series, which includes the following report types:

- TECHNICAL PUBLICATION. Reports of completed research or a major significant phase of research that present the results of NASA programs and include extensive data or theoretical analysis. Includes compilations of significant scientific and technical data and information deemed to be of continuing reference value. NASA's counterpart of peer-reviewed formal professional papers but has less stringent limitations on manuscript length and extent of graphic presentations.
- TECHNICAL MEMORANDUM. Scientific and technical findings that are preliminary or of specialized interest, e.g., quick release reports, working papers, and bibliographies that contain minimal annotation. Does not contain extensive analysis.
- CONTRACTOR REPORT. Scientific and technical findings by NASA-sponsored contractors and grantees.

- CONFERENCE PUBLICATION. Collected papers from scientific and technical conferences, symposia, seminars, or other meetings sponsored or cosponsored by NASA.
- SPECIAL PUBLICATION. Scientific, technical, or historical information from NASA programs, projects, and mission, often concerned with subjects having substantial public interest.
- TECHNICAL TRANSLATION.
 English-language translations of foreign scientific and technical material pertinent to NASA's mission.

Specialized services that complement the STI Program Office's diverse offerings include creating custom thesauri, building customized databases, organizing and publishing research results . . . even providing videos.

For more information about the NASA STI Program Office, see the following:

- Access the NASA STI Program Home Page at http://www.sti.nasa.gov/STI-homepage.html
- E-mail your question via the Internet to help@sti.nasa.gov
- Fax your question to the NASA Access Help Desk at (301) 621-0134
- Telephone the NASA Access Help Desk at (301) 621-0390

BOREAS TE-2 Stem Growth and Sapwood Data

Michael G. Ryan, Michael Lavigne

Summary

The BOREAS TE-2 team collected several data sets in support of its efforts to characterize and interpret information on the respiration of the foliage, roots, and wood of boreal vegetation. This data set contains measurements of growth and sapwood of the stems conducted in the NSA during the growing season of 1994. The data are stored in tabular ASCII files.

1. Data Set Overview

1.1 Data Set Identification

BOREAS TE-02 Stem Growth and Sapwood Data

1.2 Data Set Introduction

Field studies of woody tissue respiration were conducted at the BOReal Ecosystem-Atmosphere Study (BOREAS) Northern Study Area (NSA) in 1994. This data set includes the characteristics of the stem (growth, sapwood volume, etc.) for samples measured for wood respiration on tree stems conducted in the boreal forest during the growing season of 1994. These characteristics were sampled after the end of the 1994 growth season at the end of September 1994.

1.3 Objectives/Purpose

The objectives of the work were to:

- Determine whether respiratory parameters vary among three boreal tree species (black spruce, jack pine, and trembling aspen).
- Compare respiration parameters from the cold northern sites with those from the warmer, southern sites.

- Provide estimates of respiratory parameters for ecosystem process models.
- Use our estimates of wood respiration, estimates of wood biomass, and wood temperature throughout the year to estimate the annual carbon cost for wood respiration.

1.4 Summary of Parameters

Each data set includes the location of chamber: (1.3 m or 6 m), diameter (outside bark) of tree where chamber was located (cm), specific gravity of sapwood (g dry weight/cm³ wood), sapwood volume (cm³) assigned to segment, growth volume (cm³) assigned to segment, growth (g dry weight) assigned to segment, phloem volume (cm³) assigned to segment, percent nitrogen by dry weight in sapwood, percent sugars by dry weight in sapwood, percent starch by dry weight in sapwood, and percent nonstructural carbohydrates by dry weight in sapwood.

1.5 Discussion

In the NSA, the Terrestrial Ecology (TE)-02 team measured stem sapwood volume, growth in 1994, percent nitrogen, percent phosphorus, percent sugars, percent starch, percent nonstructural carbohydrates (all in sapwood or water-conducting xylem only) for Old Aspen (OA) (Populus tremuloides), Old Black Spruce (OBS) (Picea mariana), Old Jack Pine (OJP) (Pinus banksiana), and Young Jack Pine (YJP) (Pinus banksiana) in 1994 after the end of the 1994 growth season at the end of September 1994.

3. Theory of Measurements

Respiration of woody tissues is estimated as the CO₂ efflux at the boundary of the bark-air interface. Respiration of woody tissues will vary with temperature, sapwood volume, and perhaps sapwood nitrogen, phosphorus, or carbohydrate content. Sampling for nitrogen, phosphorus, or carbohydrate content or determining sapwood cross-sectional area of a stem involves destructive measurements. Therefore, samples are generally taken after the respiration measurements have been completed. Samples were taken with an increment borer, or for the smaller trees, we harvested and removed a short cylinder (about 1 cm thick from the stem). The sapwood/heartwood boundary was determined by holding the core or "stem cookie" up to a strong light (the sun). Sapwood is translucent, and heartwood is opaque.

4. Equipment

4.1 Instrument Description

Samples were taken with an increment borer, or with a chainsaw or handsaw.

4.1.1 Collection Environment

Twenty trees were measured in the NSA at the OJP, OBS, and OA sites, and 10 trees were measured at the YJP site.

4.1.2 Source/Platform

Measurements were taken in the field.

4.1.3 Source/Platform Mission Objectives

Not applicable.

4.1.4 Key Variables

Location of chamber (1 = 1.3 m, 2 = about 6 m), diameter (outside bark) of tree where chamber was located, specific gravity of sapwood, sapwood volume assigned to segment, growth volume assigned to segment, growth (gm dry weight) assigned to segment, phloem volume assigned to segment, percent nitrogen by dry weight in sapwood, percent phosphorus by dry weight in sapwood, percent sugars by dry weight in sapwood, percent starch by dry weight in sapwood, percent nonstructural carbohydrates by dry weight in sapwood.

4.1.5 Principles of Operation

Stem respiration was measured on 20 trees in the NSA at the OJP, OBS, and OA sites and on 10 trees at the YJP site; tree diameters spanned the range of the stand. At the OJP, OBS, and OA sites, aluminum chamber plates with an external neoprene gasket were attached to the north side of the tree with putty; loose bark was removed before attaching the chamber plate. Chambers were at 1.2 to 1.4 m height; on four trees per stand, additional chambers were placed at 6 m. For CO₂ efflux measurements, a Plexiglas chamber was sealed to the chamber plate with an elastic cord. Chamber area for OA, OBS, and OJP was 110 cm². That is counting 1/2 of the plate area (assuming 1/2 of the flux under the plate goes into the chamber and 1/2 does not). The area inside the chamber is 80.5 cm². For measurements at YJP, split Plexiglas chambers (23 cm) enclosed the entire stem, with neoprene gaskets creating a seal. This data file describes the characteristics of the tree associated with the respiration samples. Increment cores were taken from enclosed portions of stems after chambers were removed in late September 1994. We measured bark thickness, phloem width, width of the 1994 xylem ring, and sapwood thickness on one increment core. Wood density and nitrogen concentration of sapwood were measured on a second increment core. With these data, we estimated sapwood volume, dry matter growth, and phloem volume for the segment associated with the chamber (a segment of the tree stem with height = chamber height). Growth estimates were converted to molar units by assuming a 50% carbon content for oven-dried wood. Nitrogen and phosphorus were measured with a micro-Kjeldal procedure [Lachat Instruments 1992a, b]; phosphorus was undetectable in many of the initial samples, so we stopped looking for it. Soluble sugar and starch were extracted from plant material as described by Tissue and Wright [1995]. Starch and sugar concentration was determined colorimetrically using the phenol-sulfuric acid method of Dubois et al. [1956]. Methods are more fully described in Lavigne and Ryan [1997] and Ryan et al. [1995].

4.1.6 Sensor/Instrument Measurement Geometry

None.

4.1.7 Manufacturer of Instrument

Increment borers, rulers, etc., are those commonly available to the forestry trade.

4.2 Calibration

Nitrogen and carbohydrate samples were calibrated according to blanks and standards.

4.2.1 Specifications

None given.

4.2.1.1 Tolerance

None.

4.2.2 Frequency of Calibration

Standard procedures were followed to ensure quality of the nitrogen and carbohydrate samples - blanks and standards.

4.2.3 Other Calibration Information

None.

5. Data Acquisition Methods

Stem respiration was measured on 20 trees in the NSA at OJP, OBS, and OA sites and on 10 trees at the YJP site; tree diameters spanned the range of the stand. At the OJP, OBS, and OA sites, aluminum chamber plates with an external neoprene gasket were attached to the north side of the tree with putty; loose bark was removed before attaching the chamber plate. Chambers were at 1.2 to 1.4 m height; on four trees per stand, additional chambers were placed at 6 m. For CO₂ efflux measurements, a Plexiglas chamber was sealed to the chamber plate with an elastic cord. Chamber area for OA, OBS, and OJP was 110 cm². That is counting 1/2 of the plate area (assuming 1/2 of the flux under the plate goes into the chamber and 1/2 does not). The area inside the chamber is 80.5 cm². For measurements at YJP, split Plexiglas chambers (23 cm) enclosed the entire stem, with neoprene gaskets creating a seal. This data file describes the characteristics of the tree associated with the respiration samples. In the NSA, the respiration cuvettes enclosed only a portion of the circumference of the sample tree, except for the YJP site, where the cuvette enclosed the entire circumference. In the description below, 'segment' refers to a cylinder of the bole the length of which is equal to the height of the cuvette. Each data record includes the diameter (outside bark) of tree where the chamber was located (segment midpoint, cm), specific gravity of sapwood (g dry weight/cm³ wood), sapwood volume (cm³) assigned to segment, growth volume (cm³) assigned to segment, growth (g dry weight per year) assigned to segment, phloem volume (cm³) assigned to segment, percent nitrogen by dry weight, percent phosphorus by dry weight, percent sugars by dry weight, percent starch by dry weight, and percent nonstructural carbohydrates by dry weight. The measurements here are linked to the respiration measurements by site, tree number, and position on tree.

6. Observations

6.1 Data NotesNone.

6.2 Field NotesNone.

7. Data Description

7.1 Spatial Characteristics

7.1.1 Spatial Coverage

The NSA measurement sites and associated North American Datum of 1983 (NAD83) coordinates are:

- OA canopy access, site id T2Q6A, Lat/Long: 55.88691°N, 98.67479°W, Universal Transverse Mercator (UTM) Zone 14, N: 6,193,540.7, E: 520,342
- OBS canopy access tower, site id T3R8T, Lat/Long: 55.88007°N, 98.48139°W, UTM Zone 14, N: 6,192,853.4, E: 532,444.5
- OJP, site id T7Q8T, Lat/Long: 55.92842Q°N, 98.62396°W, UTM Zone 14, N: 6,198,176.3, E: 523,496.2
- YJP, site id, T8S9T, Lat/Long: 55.89575°N, 98.28706°W, UTM Zone 14, N: 6,194,706.9, E: 544,583.9

7.1.2 Spatial Coverage Map

Not available.

7.1.3 Spatial Resolution

These data are point source measurements at the given locations.

7.1.4 Projection

Not applicable.

7.1.5 Grid Description

Not applicable.

7.2 Temporal Characteristics

7.2.1 Temporal Coverage

Measurements were taken from 24-May-1994 to 25-Sep-1994.

7.2.2 Temporal Coverage Map

None given.

7.2.3 Temporal Resolution

None given.

REVISION DATE

7.3 Data Characteristics

7.3.1 Parameter/Variable

Column Name

The parameters contained in the data files on the CD-ROM are:

_____ SITE_NAME SUB SITE START_DATE END DATE SPECIES SAMPLE ID CHAMBER_HEIGHT NITROGEN_CONTENT TREE DIAMETER CHAMBER HEIGHT SAPWOOD_SPECIFIC_GRAVITY SAPWOOD VOLUME SEGMENT SAPWOOD_GROWTH_VOLUME SAPWOOD_GROWTH_WEIGHT PHLOEM_VOLUME PHOSPHOROUS CONTENT SUGAR_CONTENT STARCH_CONTENT NONSTRUCTURAL_CARBOHYD_CONTENT CRTFCN_CODE

7.3.2 Variable Description/DefinitionThe descriptions of the parameters contained in the data files on the CD-ROM are:

Column Name	Description
SITE NAME	The identifier assigned to the site by BOREAS,
51-1 <u>-</u>	in the format SSS-TTT-CCCCC, where SSS identifies
	the portion of the study area: NSA, SSA, REG,
	TRN, and TTT identifies the cover type for the
	site, 999 if unknown, and CCCCC is the identifier
	for site, exactly what it means will vary with site type.
SUB_SITE	The identifier assigned to the sub-site by
502_5111	BOREAS, in the format GGGGG-IIIII, where GGGGG is
	the group associated with the sub-site
	instrument, e.g. ${\tt HYD06}$ or ${\tt STAFF}$, and ${\tt IIIII}$ is the
	identifier for sub-site, often this will refer to
	an instrument.
START_DATE	The date on which the collection of data commenced.
END DATE	The date on which the collection of the data was
_	terminated.
SPECIES	Botanical (Latin) name of the species (Genus
_	species).
SAMPLE_ID	The sample identifier used by data collectors
CHAMBER HEIGHT	(see documentation for a detailed description). The height above the ground at which the chamber
CHAMBER_HEIGHT	was placed.
NITROGEN_CONTENT	The nitrogen content of the sample based on dried
	sample weight.
TREE_DIAMETER_CHAMBER_HEIGHT	Diameter of the tree, measured outside of the
a	bark where the chamber was located.
SAPWOOD_SPECIFIC_GRAVITY	The specific gravity of sapwood calculated as the grams of dry weight per cubic centimeter of
	fresh wood. The volume was calculated as the
	surface area of the bark of the segment
	multiplied by the radial increment. The segment
	was defined as a cylinder with height equal to
	the height of the chamber centered on the
CADWOOD VOLUME CECMENT	chamber. The sapwood volume of the segment defined as a
SAPWOOD_VOLUME_SEGMENT	cylinder with height equal to the height of the
	chamber centered on the chamber.
SAPWOOD_GROWTH_VOLUME	The volume of sapwood growth in a segment in a
	year. The segment is defined as a cylinder with
	height equal to the height of the chamber
SAPWOOD GROWTH WEIGHT	centered on the chamber. The dry weight of the sapwood in a segment
SAF WOOD_GROWIII_WEIGHT	calculated as the sapwood growth volume
	multiplied by the sapwood specific gravity. The
	segment is defined as a cylinder with height
	equal to the height of the chamber centered on
DIII ODM HOLLTAT	the chamber.
PHLOEM_VOLUME	The phloem volume of a segment. The segment is

defined as a cylinder with height equal to the height of the chamber centered on the chamber. The phosphorous content of the sample based on PHOSPHOROUS CONTENT dried sample weight. SUGAR CONTENT The sugar content of the sample based on dried sample weight. The starch content of the sample based on dried STARCH CONTENT sample weight. NONSTRUCTURAL CARBOHYD CONTENT The non-structural carbohydrates content of the sample based on dried sample weight. CRTFCN_CODE The BOREAS certification level of the data. Examples are CPI (Checked by PI), CGR (Certified by Group), PRE (Preliminary), and CPI-??? (CPI but questionable). REVISION DATE The most recent date when the information in the referenced data base table record was revised.

7.3.3 Unit of Measurement

The measurement units for the parameters contained in the data files on the CD-ROM are:

Column Name	Units
SITE_NAME	[none]
SUB_SITE	[none]
START_DATE	[DD-MON-YY]
END_DATE	[DD-MON-YY]
SPECIES	[none]
SAMPLE_ID	[none]
CHAMBER_HEIGHT	[meters]
NITROGEN_CONTENT	[percent]
TREE_DIAMETER_CHAMBER_HEIGHT	[meters]
SAPWOOD_SPECIFIC_GRAVITY	[grams][meter^-3]
SAPWOOD_VOLUME_SEGMENT	[meters^3]
SAPWOOD_GROWTH_VOLUME	[meters^3]
SAPWOOD_GROWTH_WEIGHT	[grams]
PHLOEM_VOLUME	[meters^3]
PHOSPHOROUS_CONTENT	[percent]
SUGAR_CONTENT	[percent]
STARCH_CONTENT	[percent]
NONSTRUCTURAL_CARBOHYD_CONTENT	[percent]
CRTFCN_CODE	[none]
REVISION_DATE	[DD-MON-YY]

7.3.4 Data Source

The sources of the parameter values contained in the data files on the CD-ROM are:

Column Name	Data Source

Minimum Data Value -- The minimum value found in the column. Maximum Data Value -- The maximum value found in the column.

Missng Data Value -- The value that indicates missing data. This is used to indicate that an attempt was made to determine the parameter value, but the attempt was unsuccessful.

Unrel Data Value -- The value that indicates unreliable data. This is used to indicate an attempt was made to determine the parameter value, but the value was deemed to be unreliable by the analysis personnel. Below Detect Limit -- The value that indicates parameter values below the instruments detection limits. This is used to indicate that an attempt was made to determine the parameter value, but the analysis personnel determined that the parameter value was below the detection limit of the instrumentation. Data Not Cllctd -- This value indicates that no attempt was made to determine the parameter value. This usually indicates that BORIS combined several similar but not identical data sets into the same data base table but this particular science team did not measure that parameter. Blank -- Indicates that blank spaces are used to denote that type of value.

N/A -- Indicates that the value is not applicable to the respective column.

None -- Indicates that no values of that sort were found in the column.

7.4 Sample Data Record

The following are wrapped versions of data record from a sample data file on the CD-ROM.

8. Data Organization

8.1 Data Granularity

The smallest unit of data tracked by the BOREAS Information System (BORIS) was the data collected at a given site on a given date.

8.2 Data Format(s)

The Compact Disk-Read-Only Memory (CD-ROM) files contain American Standard Code for Information Interchange (ASCII) numerical and character fields of varying length separated by commas. The character fields are enclosed with single apostrophe marks. There are no spaces between the fields.

Each data file on the CD-ROM has four header lines of Hyper-Text Markup Language (HTML) code at the top. When viewed with a Web browser, this code displays header information (data set title, location, date, acknowledgments, etc.) and a series of HTML links to associated data files and related data sets. Line 5 of each data file is a list of the column names, and line 6 and following lines contain the actual data.

9. Data Manipulations

9.1 Formulae

None.

9.1.1 Derivation Techniques and Algorithms

None given.

9.2 Data Processing Sequence

9.2.1 Processing Steps

None given.

9.2.2 Processing Changes

None given.

9.3 Calculations

9.3.1 Special Corrections/Adjustments

Not applicable.

9.3.2 Calculated Variables

Not applicable.

9.4 Graphs and Plots

Not applicable.

10. Errors

10.1 Sources of Error

None given.

10.2 Quality Assessment

Measurements quite accurately (+/-10%) reflect the characteristics of the wood underneath the sample chamber. How closely coupled the respiration measurements and characteristics of the wood are is unknown. Lavigne and Ryan [1997] examine how closely the respiration rates match the wood characteristics.

10.2.1 Data Validation by Source

None given.

10.2.2 Confidence Level/Accuracy Judgment

None given.

10.2.3 Measurement Error for Parameters

None given.

10.2.4 Additional Quality Assessments

None given.

10.2.5 Data Verification by Data Center

Data were examined for general consistency and clarity.

11. Notes

11.1 Limitations of the Data

None given.

11.2 Known Problems with the Data

None given.

11.3 Usage Guidance

None given.

11.4 Other Relevant Information

None given.

12. Application of the Data Set

These data can be used to study the sapwood volume and stem chemistry of boreal vegetation.

13. Future Modifications and Plans

None given.

14. Software

14.1 Software Description

None given.

14.2 Software Access

None given.

15. Data Access

The stem growth and sapwood data are available from the Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC).

15.1 Contact Information

For BOREAS data and documentation please contact:

ORNL DAAC User Services Oak Ridge National Laboratory P.O. Box 2008 MS-6407 Oak Ridge, TN 37831-6407

Phone: (423) 241-3952 Fax: (423) 574-4665

E-mail: ornldaac@ornl.gov or ornl@eos.nasa.gov

15.2 Data Center Identification

Earth Observing System Data and Information System (EOSDIS) Oak Ridge National Laboratory (ORNL) Distributed Active Archive Center (DAAC) for Biogeochemical Dynamics http://www-eosdis.ornl.gov/.

15.3 Procedures for Obtaining Data

Users may obtain data directly through the ORNL DAAC online search and order system [http://www-eosdis.ornl.gov/] and the anonymous FTP site [ftp://www-eosdis.ornl.gov/data/] or by contacting User Services by electronic mail, telephone, fax, letter, or personal visit using the contact information in Section 15.1.

15.4 Data Center Status/Plans

The ORNL DAAC is the primary source for BOREAS field measurement, image, GIS, and hardcopy data products. The BOREAS CD-ROM and data referenced or listed in inventories on the CD-ROM are available from the ORNL DAAC.

16. Output Products and Availability

16.1 Tape Products

None.

16.2 Film Products

None.

16.3 Other Products

These data are available on the BOREAS CD-ROM series.

17. References

13. ABSTRACT (Maximum 200 words)				

The BOREAS TE-2 team collected several data sets in support of its efforts to characterize and interpret information on the respiration of the foliage, roots, and wood of boreal vegetation. This data set contains measurements of growth and sapwood of the stems conducted in the NSA during the growing season of 1994. The data are stored in tabular ASCII files.
